Weather Discussion:

A low-level trough is in the vicinity, but should pass over Saint Vincent and the Grenadines without much fanfare. A few showers are likely for the remainder of the day into tonight.

There's a moderate chance of isolated showers on Friday, with this chance increasing around Saturday as equatorial moisture moves over the island chain. Instability will linger into Sunday, but the chance of showers is forecast to decrease slightly.

Gentle to moderate east north easterly trades (15km/h-25km/h) will move over the islands, gradually increasing in speed around Saturday (20km/h-30km/h). Seas are forecast to be generally moderate (1.5m-2.0m) during the next few days across SVG, and moderate haze intrusion is forecast from Saturday.
