## Weather Discussion:

An upper level trough is providing support to unstable surface conditions that linger across our islands. Occasional cloudy skies and showers with varying intensities are likely to occur within the next 3 days. Relatively fairer conditions should return around Friday when the Atlantic high pressure system is expected to regain dominance.

Gentle to moderate (15-30km/h) north easterly to east north easterly trades are crossing our islands. A slight increase (~35km/h) is expected on Thursday with a temporary shift in direction to east south easterly. Seas should remain moderate in open water with swells peaking up to 1.5 m on western coasts and near to 2.0m on eastern coasts. **Sea bathers and small craft operators should continue to exercise caution near the shoreline for breaking wave action and rip currents especially on eastern and northern coasts.** No significant dust haze intrusion is anticipated within the next 3 days.
