## Weather Discussion:

The Atlantic high pressure system is expected to remain dominant over the next few days. Relatively fair and partly cloudy conditions are anticipated with a few isolated intermittent showers. Moderate to fresh (20-30km/h) east south easterly trades are crossing the islands but will shift to east north easterly from Tuesday while decreasing (< 20km/h). Seas are currently moderate in open water. **Marine users should be prepared for above normal sea swells and breaking wave action and rip currents along the shore line due to the presence of long-period northerly swells.** Sea conditions should improve along Wednesday. In addition, varying concentrations of Saharan dust haze will linger throughout this forecast period reducing visibility and air quality.
