Weather Discussion:

The atmosphere across Saint Vincent and the Grenadines (SVG) is dry and relatively stable. Therefore, there remains limited chance of isolated showers during the next 3 days. A shear line will be in the vicinity around Thursday, but is expected to affect mainly the Northern Windward Islands, nevertheless its presence may allow for a few cloudy spells across SVG.

Winds will blow from the east to east south east (E-ESE) at 20km/h to 30km/h. An increase in wind speeds (~35km/h - breezy conditions) is expected around Friday evening into the weekend. Seas are forecast to be moderate gradually improving along Thursday into Friday with east north easterly swells ranging between 1.0m to 1.5m on the western coasts and 2.0m to 2.5m on the eastern coasts. Saharan dust haze of varying concentrations will be across the islands during the next 3 days.
