Weather Discussion:

Breezy conditions will continue into tonight across Saint Vincent and the Grenadines, gradually decreasing during the next few days. Moisture content at both the low-mid levels will fluctuate, and an upper level trough will be in the vicinity from Monday. Therefore, scattered showers are forecast during this forecast period, with chance of some sunshine intermixing. Isolated thunderstorms are likely. Thick haze should be across the island chain, reducing visibility and also inhibiting shower activity.

Moderate east north east (ENE) trades (15km/h-30km/h) will move across the islands from Monday and seas should remain slight to moderate in open waters with swells ranging between 1.0m – 2.0m.
