Weather Discussion:

The Atlantic High Pressure System continues to dominate the weather across St. Vincent and the Grenadines (SVG) with fair to partly cloudy skies. Slight to moderate haze across our area is due to varying concentrations of Saharan dust. By Friday afternoon, a weak tropical wave is expected to move just south of SVG, spreading a few scattered showers across the Grenadines/southern portion of our islands. Shower activity could increase overnight into early Saturday, with isolated thunderstorms and a few showers reaching mainland St. Vincent. A temporary reduction in cloudiness is expected early Sunday, before low-level clouds bring a few scattered showers across our islands again during the afternoon and into Sunday night.

Moderate to fresh (25 - 35km/h) east north-easterlies gusting near 45 km/h could peak Friday night into Saturday, decreasing (15 - 30km/h) Sunday and turn east south-easterly by evening.

Marine conditions are slight to moderate, with swells ranging 1.0m to 2.0m across our islands.
