Weather Discussion:

A ridge pattern is dominant, allowing for fair conditions across our islands. A few weak pulses could initiate a few isolated showers across the Grenadines on Monday afternoon with pockets of showers anticipated for Tuesday. Cloudy conditions are anticipated around midweek as a southward moving shearline increases the potential for light to moderate showers.

Gentle to moderate (~15-25km/h) easterly to east north-easterly trades are currently crossing our islands. A slight increase is expected on Wednesday with a temporary shift to east south easterly. Seas are slight to moderate in open water ranging between 1.0m to 2.0m and rising with long period waves anticipated across the next 3 days. **Small craft operators and sea bathers should exercise caution for above normal sea swells, dangerous rip currents and breaking wave action near the shoreline.** Saharan dust haze concentrations should be noticeable across our area along Tuesday.
