Weather Discussion:

SVG will continue to experience breezy conditions into next week. In addition, Saharan dust haze concentrations will continue to cross our islands during this forecast period. **Residents should remain alert for reduced air quality and visibility.** Fair to partly cloudy skies can be expected on Friday whereas a weak shearline could trigger some showers early Saturday. The Atlantic High pressure system should again dominate on Sunday with relatively fair conditions. Fresh to strong (~30-40 km/h) east south easterly to east north easterly trades are currently crossing our islands. Moderate to strong (~25-40 km/h) winds are anticipated from Friday. Consequently, seas will remain agitated. The small craft and high surf advisory is extended for SVG and its coastal waters until 6am 12th June 2025. **Only vessels capable of withstanding swells of these magnitudes should venture out. Sea-bathers are advised to stay out of the water.** Seas should become generally moderate in open water with swells peaking to 2.5m from Friday.
