## Weather Discussion:

The Atlantic High Pressure System is the dominant feature across our islands. Patches of low-level moisture within the wind flow will facilitate occasionally cloudy skies and intermittent brief light showers within the next two days. The chance of showers increases from Monday(mid morning) as a weak shearline is forecast to cross the islands.

Easterly to east north easterly trade winds ranging between 10 to 35 km/h(genle to fresh) are expected during the next 72 hours.

Consequently, slight to moderate east north easterly sea swells ranging between 1.0 to 2.0 meters or 3.0 to 7.0 feet are forecast during the next few days.

Varying concentrations of Saharan dust haze is expected to cross the islands from late Sunday.
