## Weather Discussion:

Weak unstable conditions are affecting our islands generating cloudy conditions with occasional showers. Fair conditions are anticipated on Thursday before a shearline increases the chance of showers as evening approaches. Unstable conditions associated with this feature would maintain cloudy skies as the week closes.

Gentle to moderate (~15-25km/h) east north-easterly trades are currently crossing our islands. Wind speeds should increase to fresh (~35kmh) from Friday. Seas are slight to moderate in open water ranging between 1.0m to 2.0m, rising by Friday evening. Long period waves are anticipated across the next 3 days. **Small craft operators and sea bathers should exercise caution for above normal sea swells, dangerous rip currents and breaking wave action near the shoreline.** Saharan dust haze concentrations should be noticeable across our area along Friday.
