Weather Discussion:

A tropical wave continues to affect the islands today, with pockets of scattered moderate showers, breezy conditions and a high chance of isolated thunderstorms. Model guidance indicates that most of the activity could be concentrated over the southern portion of the island chain. Instability lingers into tonight.

By Saturday, wave would have passed, and an improvement in the weather conditions are anticipated.

Cloudy conditions will persist along Sunday with scattered showers and slight chance of isolated thunderstorms due to low-level instability.

Similar conditions to Sunday is expected on Monday as another tropical wave approaches the island.

ESE winds are forecast at 5mph-20mph (8km/h-32km/h), becoming ENE/E on occasions. Seas are forecast to be slight to moderate in open waters with swells peaking at 1.0m on the western coasts, and 1.5m-2.0m on the eastern coasts. Haze of varying concentrations will be across the islands.
