Weather Discussion:

A tropical wave with a 40% chance of cyclone formation is affecting the islands. Pockets of showers, light rain, thunderstorms and gusty winds are expected within the next 24 hours. A flash flood watch is in effect for SVG until 12 Noon 3rd September 2024. **Residents and motorists in areas prone to flooding and landslides or near rivers and streams should be prepared.** By Tuesday evening, a weak ridge pattern should rebuild. However, warm conditions are likely to return on Wednesday and Thursday allowing for localised afternoon showers.

Light and gentle (<20km/h) south easterly trades are crossing the islands with higher gusts near showers. A slight and temporary increase (20 to 35km/h) is expected on Tuesday. Sea conditions are slight (0.5m to 1.2m) however, gusty winds near showers will agitate the ocean surface, resulting in locally moderate to rough conditions at times. **Marine users should exercise extreme caution.** Sea conditions could improve by mid Tuesday. No significant Saharan dust haze concentrations are expected during this forecast period.
