Weather Discussion:

Weak surface to low-level instability across the islands will continue to generate occasional light to moderate showers during today. However, by nightfall, model guidance suggests a deterioration in weather conditions due to a more favorable mid to upper atmosphere. As a result, shower activity is expected to increase in frequency and intensity into Tuesday. Cloudy skies with pockets of heavy showers and isolated thunderstorms are likely. **Residents and motorists in areas prone to flash-flooding or near rivers and streams should remain alert.**

Easterly winds ranging between 15 km/h to 30 km/h will continue. However, a deduction in wind speed between 10 km/h to 25 km/h is expected by late Monday.

Seas will be slight to moderate in open waters with swells ranging between 1.0m to 2.0m.

Analysis also suggests a thin layer of Saharan dust haze moving into the area by Monday.
