Weather Discussion:

A few light showers are possible today across Saint Vincent and the Grenadines as low level moisture continues to be across the island chain. An upper level trough is present and can result in cloudy skies but model guidance is signifying a dry mid-level indicating that showers could be brief. Similar conditions are expected on Saturday while the chance of scattered showers are forecast around Sunday evening/night. Moderate winds will blow from the east (E), at 15km/h to 35km/h, allowing for breezy conditions at times. Seas will be moderate in open waters with swells ranging between 1.5m to 2.0m. There will be no significant haze intrusion within this forecast period.

Presently, the first tropical wave located in the far eastern Atlantic is near stationary.
