December 18th**

Generally cloudy with scattered showers and chance of isolated thunder.

Weather
Advisory

Exercise caution

Seas: moderate 1.5m to 2.0m / 5ft to 7ft

Marine
Advisory/warning
None

Weather Discussion:

Generally, cloudy conditions with scattered showers (60% of forecast area) are forecast across Saint Vincent and the Grenadines as instability emanating from a low-pressure system in the Central North Atlantic affects the region. Favourable mid-upper levels could cause these showers to become moderate at times, and also increase the chance of isolated thunderstorms (20% of forecast area). **Therefore, residents and motorists in areas prone to flash-flooding and landslides or near rivers and streams should exercise caution.**

Winds will blow from the east north east (ENE) at approximately 20km/h-30km/h. Seas should gradually improve, becoming moderate in open waters with swells ranging between 1.0m-1.5m on the western coasts and 2.0m on the eastern coasts. No significant haze intrusion is forecast.
