None

Seas: moderate 1.5m to
2.0m / 4ft to 7ft

Marine
Advisory/Warning:
None

Weather Discussion:

The chance of shower activity remains low on Monday, with the chance increasing around Tuesday and Wednesday as low-level moisture pushes from the south. Model guidance is indicating a moderate chance of isolated thunderstorms around Tuesday night/Wednesday. Winds will blow generally from the east at 15km/h-30km/h. Seas will be slight to moderate in open waters (1.0m-1.5m) and increasing due to northerly swells. Slight haze intrusion will continue to be across the islands. By Wednesday, projection shows that the disturbance in the eastern Atlantic would be located roughly around latitude 15N; longitude 50W, moving west to west-northwestward and has a high chance of cyclone formation. Further guidance is indicating that another disturbance will move off the coast of Africa during this time.
