Weather Discussion:

Fair conditions alternating with a few cloudy spells are forecast as moisture content throughout the atmosphere (lower-upper) remains unimpressive during the next upcoming days. Instability will be present to the north of Saint Vincent and the Grenadines, and this could trigger a few isolated showers across SVG. Saharan dust intrusion of varying concentrations will traverse the area reducing air quality.

It will be breezy (20km/h-35km/h) at times, with easterly trades gradually increasing (30km/h-40km/h) into the weekend. Seas should remain slight to moderate in open waters with swells ranging between 1.0m-2.0m, however with an increase in wind speeds towards the weekend, the waters can become agitated.
