Be alert..reduce visibility
due to Saharan dust

Weather
Advisory/warning
none

Seas: slight to moderate
1.0m to 1.5 m / 3ft to 5ft

Marine advisory/warning
none

Weather Discussion:

The chance of significant shower activity across Saint Vincent and the Grenadines over the weekend is low as moisture content remains limited at both low and middle levels, and sinking air aloft. In addition, Saharan dust intrusion will continue to be across the island chain limiting shower activity and reducing visibility and air quality. The days will continue to be hot and humid. The highest chance of a few showers increases from Sunday night, with Monday forecast to be occasionally cloudy with chance of few scattered showers.

East southeasterly (ESE) trades at 15km/h-25km/h will move across the island chain, backing to east (E) on occasion. Seas will be slight to moderate in open waters with swells ranging between 1.0m-1.5m on the western coasts and peaking at 1.5m on the eastern coasts.
