

FLASH-FLOOD WATCH is in effect for ST. VINCENT AND THE GRENADINES

Issued at 2:00 pm, Thursday 3rd July, 2025

Unstable conditions associated with a tropical wave are maintaining a few scattered showers with thunderstorm activity across St. Vincent and the Grenadines (SVG). Periods of light-moderate rain, pockets of moderate-heavy showers, gusty winds and thunderstorm activity are likely to continue tonight (Thursday) and during Friday.

Rainfall accumulations across SVG could range 50 - 75mm (2 - 3 inches), with isolated higher amounts leading to flash-flooding and land slippage.

As a result, a Flash-Flood Watch is in effect for St. Vincent and the Grenadines until 6pm Friday 4th July 2025.

...Residents and motorists in areas prone to flooding/flash-flooding and landslides or near rivers and streams should be prepared...

Showers and thunderstorm activity are expected to decrease late Friday, with a few showers lingering across our islands during the weekend.

A Flood-Watch is issued when conditions are favorable and there exists the possibility of flooding during the watch period.

This flash-flood watch may be upgraded to a warning if conditions warrant.
