## **A FLASH-FLOOD WATCH IS IN EFFECT FOR ST. VINCENT & THE GRENADINES**

**Issued: 7:00 am Monday, 19<sup>th</sup> May, 2025**

Unstable conditions are crossing our islands under a favourable mid to upper level environment. Pockets of showers, some of which may be moderate to heavy at times, periods of rain and isolated thunderstorms are anticipated across St Vincent and the Grenadines within the next 12 hours. Rainfall accumulations of 50-75mm (approximately 2-3 inches) with isolated higher amounts in mountainous areas are also possible.

Various stations across the mainland have already recorded close to an inch of rainfall and it is anticipated that this would increase during the passage of the day, therefore, the weather advisory which is already in effect for St. Vincent & the Grenadines has been upgraded to a flash-flood watch and will remain in effect until 6:00 pm today Monday 19th, May 2025.

**Residents and motorists in areas prone to flooding and landslides or near rivers and streams should be prepared.**

A Flood-Watch is issued when conditions are favourable and there exists the possibility of flooding during the watch period.

This flash-flood watch may be upgraded to a warning if conditions warrant.

**Prepared by**

*Mr. Gregory Cato*
