Weather Discussion:

As a tropical wave crosses the Eastern Caribbean, occasional showers are expected along Friday. Instability trailing this wave will continue to trigger additional showers on Saturday. On Sunday, similar activity is expected as moisture patches will likely be present. As Monday progresses, relatively fair conditions should be experienced.

Northeasterly trades ranging from 15 to 30 km/h are crossing our islands but wind speeds are forecast to decrease (15-25km/h) from Saturday. Seas are slight to moderate across SVG, with swell heights ranging between 0.5 m to 1.0 m west of our islands and ranging from 1.2 m to 1.8 m east of our islands. Saharan dust haze concentrations are forecast on Monday, reducing visibility and air quality. **Take precautions.**
