WEATHER INFORMATION STATEMENT THREE (3)
FOR SAINT VINCENT AND THE GRENADINES

Issued at 5:00 am, Thursday 19th October, 2023

At 5 am, the center of Tropical Storm Tammy was located near latitude 13. 5° North...longitude 54.8 ° West, or approximately 440 miles (710 kilometers) east of SVG, and moving towards the west at 17 mph (28 km/h). A turn toward the west-northwest is forecast tonight, followed by a turn toward the northwest.

Maximum sustained winds are 40 mph (65 km/h) with higher gusts. Gradual strengthening is forecast during the next couple of days.

On the latest forecast track, the center of the Tropical Storm Tammy is expected to pass well north of mainland St. Vincent during Friday 20th October 2023. On this track it is **not** expected to directly impact SVG. Therefore, no Tropical Storm Watch is required.

However, outer bands of Tropical Storm Tammy are likely to generate pockets of moderate to heavy showers, thunderstorm activity and occasional gusty winds from later today and during Friday. In addition, due to an expected gradual deterioration in sea conditions, a marine advisory will be in effect from 12 noon today, Thursday 19th October, 2023.

The public is advised to stay informed with the progress of this system.

The St. Vincent and the Grenadines Meteorological Services will continue to closely monitor Tropical Storm Tammy and issue updates and/or advisories as necessary.
